

Boundary and Topographic Survey, Howell Township, NJ

GTS Consultants provided detailed topographic survey for the installation of a new cellular phone tower at the Kelly Chevrolet facility on the southeast (near left) corner of Allaire Road (County Route 524) and Lakewood – Farmingdale Road (County Route 547).

The survey base map was used by another consulting firm as the basis for their zoning drawings for municipal approval and ultimately for construction drawings to obtain construction permits.

As part of this project, GTS reviewed the property title report to determine what easements, if any, encumbered the property and if there were any legal constraints on the area of the proposed wireless installation.

GTS followed these tasks with construction stakeout and an as-built survey upon completion of the installation. GTS Consultants has provided boundary and topographic surveying for hundreds of wireless installations throughout New Jersey, New York, and eastern Pennsylvania. Services cover the project life from planning and site acquisition, through engineering and zoning, to construction and in-service operations.

GTS Consultants provides boundary and topographic surveying, utility locations, wetland locations and other surveying services necessary for the successful planning, design, and construction of residential, commercial, and industrial development.
