

Army National Guard, New Jersey

GTS Consultants prepared topographic and utility survey for several Army National Guard armories throughout the state of New Jersey. Sites included Cape May, Vineland, Sea Girt, Westfield, Lawrenceville, Teaneck (pictured above), and Somerset. The surveys were prepared to support the design of vehicle maintenance facility improvements.

Surveys included the detailed location and mapping of surface utility features, storm and sanitary sewer systems, buildings, curb lines, sidewalks, parking lots, overhead wires, and fences. Drawings were prepared in electronic (AutoCAD) format to client specifications. All surveys were delivered on time and on budget. The Cape May facility is pictured at left.
