

## School Surveys, New Jersey

GTS Consultants has prepared boundary, topographic and utility survey for several public school facilities throughout the state of New Jersey. Sites included three schools in Bridgeton, a school in Asbury Park, and the Media Center for the Newark Public Schools. The surveys were prepared to support the design of various improvements from building expansion to parking lot circulation and drainage improvements.

Pictured at left is the front entry and bus drop off area of the Indian Avenue Elementary School in Bridgeton, Cumberland County, NJ. In addition to survey base mapping, GTS provided survey location of delineated wetlands and flood plains to support environmental permitting efforts needed for the schools projects.
