

Weequahic Park Road Bridge, City of Newark Essex County, New Jersey

GTS Consultants provided topographic survey and utility mapping for the replacement of the Weequahic Park Road Bridge. The survey task included detailed elevations of the bridge arch structure to maintain the historical appearance. The structure spans over Conrail Tracks which in turn span over Route 22. GTS further provided survey control for construction layout. This project was provided under sub-contract to Essex County. Recent aerial photography shows the bridge construction underway.
